

LIPOPHILIC ALULA PEREGRINA™ EXTRACT

PATENT N°WO2021234159

Instant skin soothing and protection with long-term cell DNA repair

ENGLISH NAME Lipophilic AlUla Peregrina™ Extract
BOTANICAL ORIGIN *Moringa peregrina* from AlUla
PLANT SOURCE Seeds
INCI Moringa peregrina seed extract and Caprylic/
Capric Triglyceride
Natural ingredient index = 1 (ISO 16128)
TYPE Liquid extract
PRESERVATIVES FREE
USE LEVEL 2.0% - 5.0%
SOLUBILITY Oil soluble
PACKAGING MATERIALS Food grade polyethylene
bags, polyethylene drumsbags, polyethylene drums

The cold press of the Peregrina seeds reveals a precious virgin Peregrina oil. The by-product of this extraction is a cake traditionally used for its nutritional properties. Recent analytical and clinical studies uncovered the unparalleled skin cell DNA integrity protection of the Peregrina press cake, contributing to the outstanding durability of the Peregrina seeds.

The Lipophilic AlUla Peregrina™ Extract instantly protects the skin with long-lasting results.

COSMETIC BENEFITS

The Lipophilic AlUla Peregrina™ Extract:

- protects skin cell DNA integrity
- prevents and treats skin sagging
- provides instant for the surface of the skin
- plumps the surface of the skin

BIOLOGICAL ACTIVITY

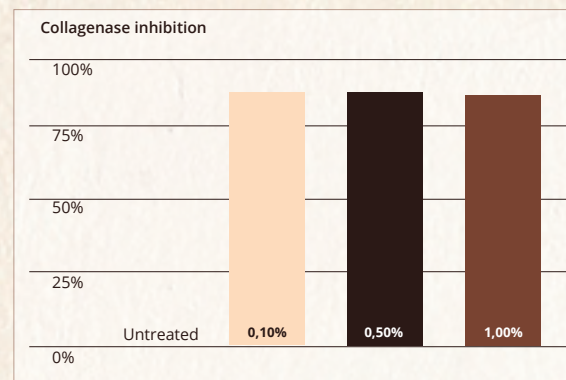

Long-term anti-aging action through preventive protection of cell DNA integrity

The Lipophilic AlUla Peregrina™ Extract provides long-term anti-aging action by activating telomerase. This enzyme repairs the telomeres of the chromosomes during successive rounds of replication to minimize the telomere shortening and extend the number of replications of the chromosomes.

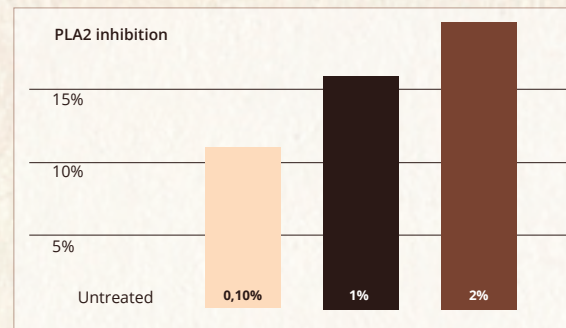

Curative and preventive anti-aging

The Lipophilic AlUla Peregrina™ Extract prevents and treats skin sagging by inhibiting collagenase. Collagenase degrades collagen in the skin.

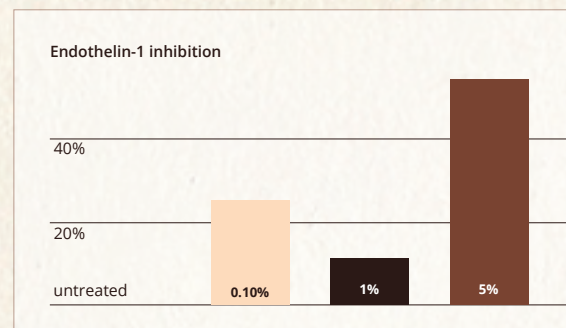

Soothing effect

The Lipophilic AlUla Peregrina™ Extract provides a soothing effect for tired or aging skin by inhibiting phospholipase A2, a key enzyme promoting inflammation.

Plumping effect

The Lipophilic AlUla Peregrina™ Extract provides a plumping effect for tired or aging skin by inhibiting Endothelin-1, the most potent vasoconstrictor in the human body.

Hydration

After 21 days of application of the Lipophilic AlUla Peregrina™ Extract, the average value of TEWL remained stable.
